

MemorialCare Rehabilitation Institute

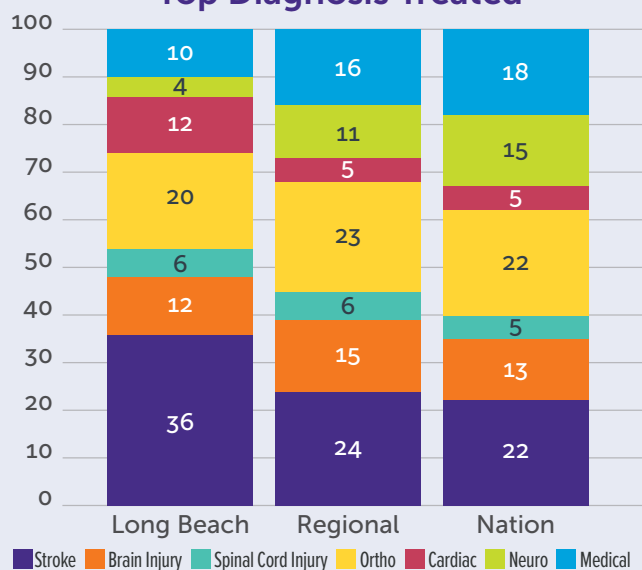

at Long Beach Medical Center

Rehabilitation Services Outcomes - 2025

Stroke | Orthopedic | Brain Injury | Spinal Cord Injury

As a Commission on Accreditation of Rehabilitation Facilities (CARF) accredited facility, the MemorialCare Rehabilitation Institute at Long Beach Medical Center's inpatient rehabilitation program is dedicated to getting patients home quicker and with more functional independence. Below is a snapshot of our most recent patient outcomes.

Top Diagnosis Treated

Who We Serve — Top Diagnoses Treated at the MemorialCare Rehabilitation Institute

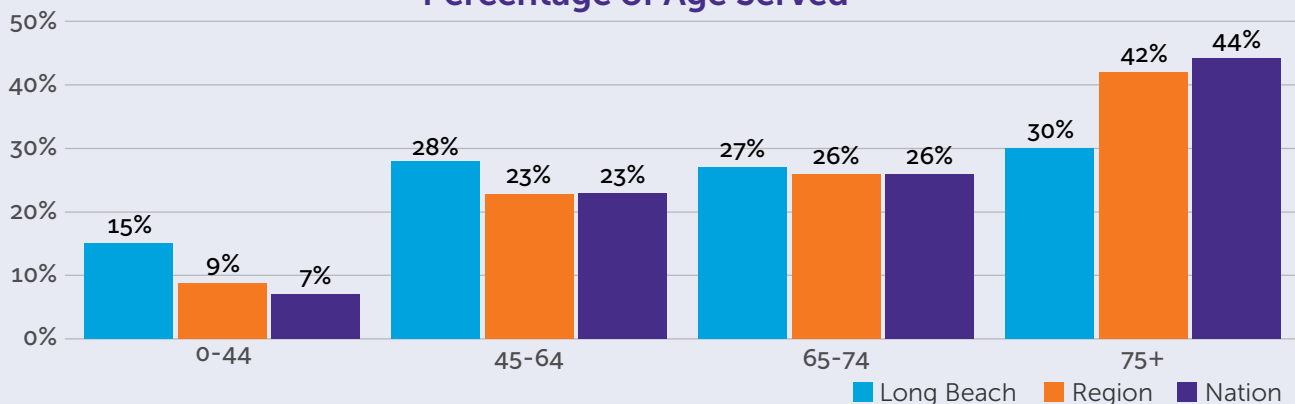

In 2024, 57% had neurological impairments, such as stroke, spinal cord injury, brain injury or other neurological conditions.

498 total patients were treated at the Rehabilitation Institute at Long Beach Medical Center in 2025.

Who We Serve — Demographics

The Rehabilitation Institute serves a greater population under the age of 65 years than other inpatient rehabilitation facilities in the region.

Percentage of Age Served

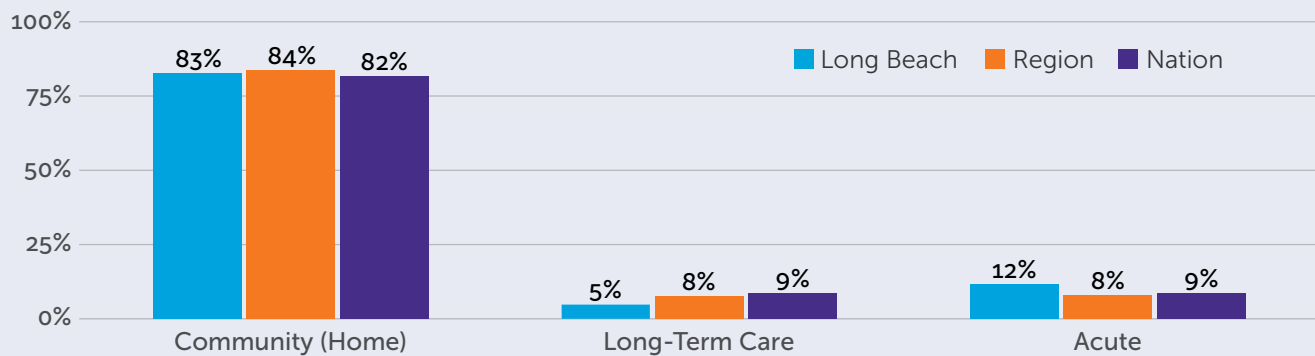

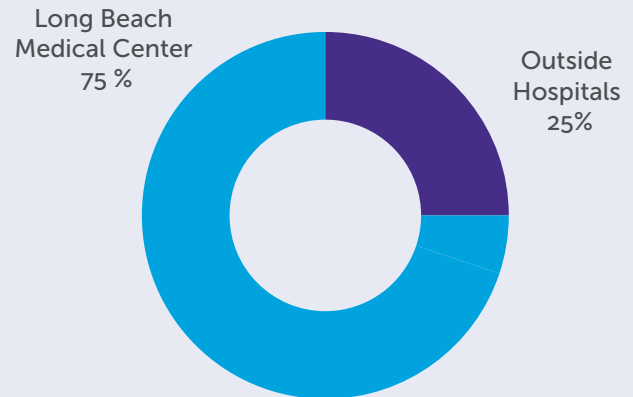

Where Our Patients Come From

Often, our patients are transferred from other hospitals because they require a higher level of specialty care. Of our admissions, 25% come from hospitals outside of our own medical center.

Most Patients Go Home — Not to a Nursing Home

We know that our patients' number one goal is getting back to their lives. At the Rehabilitation Institute, our therapists, nurses, and physicians have that same goal and will partner with patients to achieve it. In total, 83% of Long Beach Medical Center patients are discharged to their home and not a nursing home.

Patients Transferred From

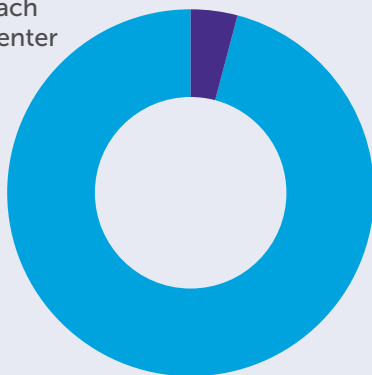

Excellent Patient Experience

95% of Long Beach Medical Center patients were satisfied with the services received during their rehab stay.

Satisfaction is based on Inpatient Rehab Facility MedTele outcomes data for 2022 (percentage of patients that agree or strongly agree).
